# Newman Roller Split-Liner Tape®

Newman Roller Split-Liner Tape is a clear tape engineered for complete resistance to chemicals and inks commonly used in screen printing, and is particularly good with difficult UV inks. It removes completely and cleanly every time for frustration-free use.

Split-Liner tape can be used as an ink dam to protect the frame, or as a divider when printing with multiple inks at once. To do this, half of the liner is removed and the tape adhered to the mesh. The remainder of the liner remains intact, forming a vertical barrier. Because it is not adhered to the frame, this tape allows unimpeded flex while printing, increasing the usable print area and maximizing the free mesh area. For use on all types of frames.

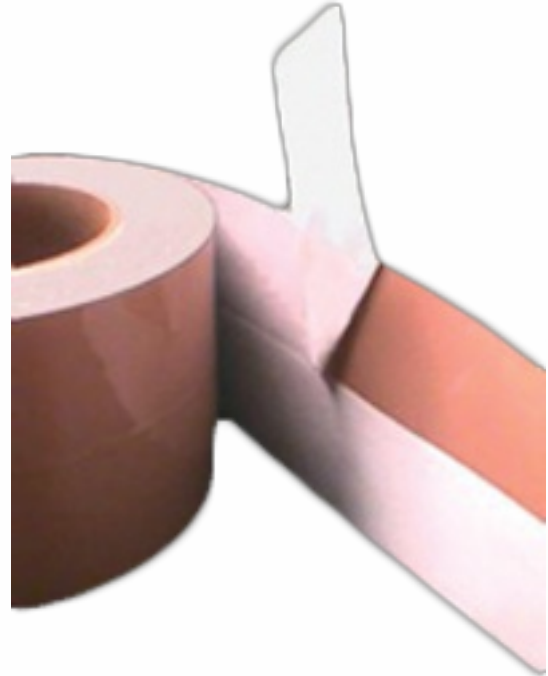

## FEATURES

- Clear
- Chemical and ink resistant
- Removes cleanly
